

Interested in Mathematical modeling and Scientific Computing?

Come and prepare your MSc at UPMC in Paris, with a PGSM-Inria scholarship!

Inria Paris promotes its research priorities by attracting outstanding students to the "Mathematical Modeling" program of the Master's degree in "Mathematics and its applications" at *Sorbonne Universités UPMC - Paris 6*, France.

Two scholarships will be awarded to *2nd year* Master's students. These 10-month scholarships (1100 euros/month) are scheduled to start in September 2016. They are funded by *Inria* and administrated by the *Fondation Sciences Mathématiques de Paris (FSMP)*. They may be extended to 12 months if the student goes on to study for a PhD at *Inria*. The *FSMP* also provides support for traveling, administrative formalities, French language lessons, *etc*.

Selection

The selection is made by a jury of 6 persons (3 from *Inria Paris*, 2 from *UPMC*, and 1 from the *FSMP*). The jury evaluates the compatibility of the student's background and project with the research undertaken by the *Inria* teams that have close links with the UPMC Master program in Scientific Computing and Mathematical modeling in biological and medical sciences, geophysics and material sciences - in particular the *Ange*, *Alpines*, *Mamba*, *Matherials*, *Mycenae*, *Reo* and *Serena* teams. Applicants are encouraged to look at the web sites of these teams before writing their letter of motivation. Geographic mobility is also an important criterion.

These scholarships are only available to students who will register for the 2nd year of the Master's degree in "Mathematical Modeling" at UPMC. Students registered at other universities (Erasmus, etc.) and attending only a few courses in this Master's program are not eligible.

Application

Applications must be made online, from December 1st, 2015.
